

Want greener grass?

Ever notice that your neighbor's grass looks so much greener than yours?

Want to know a little secret?

You can have that beautiful green lawn **AND** still help keep our reservoirs healthy!!

- The ideal height for grass is 3 inches. Taller grass has deeper, healthier roots, which means greener blades.
- Another great tip for greener grass - leave the clippings on your lawn as they will act as fertilizer for your lawn and protect the blades from sunburn! Re-using your clippings is cost effective and environmentally friendly to our reservoirs.

Bottom line - keeping your lawn taller and leaving the clippings on the lawn means less work for you and a happier, healthier lawn to enjoy AND clean reservoirs!

Let's all do our part to make the
Town of Southeast beautiful!
